SUMMARY

Engineering graduate with a strong interest in product development, project management, and technology-driven problem solving. Skilled at turning ideas into practical, user-focused products through fast execution and modern development tools. Comfortable working across both technical and creative workflows, with a focus on building functional, deployment-ready applications. Known for adaptability, quick learning, problem-solving, and working effectively in fast-paced environments.

PROJECTS

Wardrobe-AI

[Live](#) [GitHub](#)

WardrobeAI is a personal styling app that turns your closet into something you can actually use. You take photos of your clothes, and it automatically figures out what each piece is, what color it is, and what style or occasion it suits. From there, it helps you plan outfits, suggests new combinations you might not have thought of, lets you schedule what to wear on a calendar, shows you a visual breakdown of your wardrobe's colors so you can spot gaps, and recommends specific items worth buying to fill those gaps — complete with real product photos and shopping links.

Cuerates

[Live](#) [GitHub](#)

Cuerates is a personal movie and TV show logging application that lets you log what you've watched, build a watchlist, and discover new titles tailored to your taste. It has a social layer where you can follow friends, share recommendations, and see what they're watching. The app also offers AI-powered suggestions based on your viewing history. Available as both a web and a desktop application.

Dancematch

[Live](#) [GitHub](#)

Dance Match is a real-time multiplayer dance rhythm game where players compete by matching on-screen dance poses using their webcam. It combines AI-powered pose detection, WebRTC peer-to-peer video, and Socket.IO multiplayer rooms into a full-stack web game.

AUTOTRACK

[GitHub](#)

AUTOTRACK is a smart vehicle detection and workshop management system designed for small workshops with IP cameras. It automatically detects vehicles at entry and exit gates, reads license plates, and logs them into a tracking board where staff can monitor every vehicle through four stages — Waiting, Entered, Temporarily Out, and Exited — giving the team a real-time view of their entire workshop floor.

EXPERIENCE

Freelancing

2026

AI-Assisted Development
Independent Projects

EDUCATION

B.Tech, Computer Science & Engineering (AI/ML)

Graduated 2025

University of Engineering & Management, Kolkata

Class XII

2021

Newtown School — 83%

Class X

2019

Newtown School — 90%

CERTIFICATIONS & ACTIVITIES

NCC Naval — National Cadet Corps

2025

'C' Certificate

SKILLS

Design

UI/UX Design, Figma, Prototyping, Prompt Engineering

Soft Skills

Leadership, Communication, Teamwork, Adaptability, Problem Solving, Fast Learning

Development & Tools

React, JavaScript, Python, C++, HTML, CSS, GitHub, Docker, Deployment & Hosting

Languages

English, Hindi, Bengali (conversational)
